Arnotts

Melbourne, Victoria, Australia

Motion Control system using a Rockwell PLC and Schneider Twinline AC Servo to perform QA testing for leaks on product packaging

Arnotts, a world renowned manufacturer of packaged food products, requested Itech Corporation to develop a solution to a problem that they were experiencing on their potato chips packaging machinery. Itech Corporation was engaged by Arnotts to develop a solution which involved the replacement of an old PLC and ageing motor that was causing frequent downtime with a new precision system comprising a Rockwell MicroLogix PLC and Twinline AC Servos from Schneider with system design, programming, installation and commissioning by Itech Corporation.

The resulting system has delivered significant improvements to the process.
